

Farming and Manufacturing Practices

We grow the majority of our raw materials on company-owned, organically certified farmland.

- Fertile soil located in Wisconsin's Kettle Moraine basin
- Verification of the appropriate mineral and nutrient levels in the soil before planting begins
- Use of organic seed only
- Consistently monitoring the health of our crops
- Crop rotation every year to prevent disease and ensure soil vitality
- Practice eco-sensitive manufacturing by returning plant and other raw material by-products to the land after processing

We process to preserve enzymatic vitality and nutritional potential of ingredients.

- Exclusive low-temperature, high-vacuum drying techniques
- A special separating process to extract a concentrated raw material laden with both fat-and water-soluble nutrients
- Immediate processing of plants upon harvest
- No artificial flavoring
- Only natural binding ingredients

We maintain product quality and integrity through exemplary quality control standards.

- Degreed microbiologists and chemists on-site
- Weekly bacteriological tests on as many as 400 samples of raw materials, work in process, and finished products
- Vitamin and mineral analysis to ensure label claims are accurate and that maximum nutrition is delivered
- Physical tests on tablets, capsules, and powders to ensure product consistency

The History & Principles Of Standard Process

Founded in 1929 by Dr. Royal Lee, Standard Process has been a leader in the field of natural whole food supplements for 75 years. Dr. Royal Lee believed that, "The quality of a whole food supplement is dependent on the quality of the manufacturing process." This remains the foundation of the Standard Process doctrine today. Owned and operated by relatives of Dr. Lee, Standard Process manufactures its supplements from start to finish at its facility located in the heartland of America: Palmyra, Wisconsin. Beginning at the company's 1,000 acres of farmland and continuing through the final stages of our unique processing, Standard Process provides the highest quality food supplements available.

Maintain Your Inner Harmony

*We have combined St. John's wort extract, whole St. John's wort powder, and inositol with a proprietary, whole food based mineral and nutrient complex to further enhance the desired calmative effect of St. John's wort. The formula also contains our product Min-Tran[®], a natural calmative, which contains calcium and magnesium to help relax the nervous system and promote healthy transmission of nerve impulses. This assures that our product, **St. John's Wort-IMT[™]**, offers patients a safe and effective means of mood and emotional support.**

We have taken current, scientifically valid information regarding St. John's wort and coupled it with whole food ingredients for central nervous system balance based on the age-old wisdom of our founder, Dr. Royal Lee.

How St. John's Wort-IMT[™] Keeps You Healthy...

Enhances Immune Response

St. John's wort can help support the body's natural resistance mechanisms.*

Helps You Maintain Calm

St. John's Wort-IMT contains inositol to increase the nervous system's response to emotional stimuli. It helps maintain calmness and helps the nervous system operate at peak efficiency as it copes with the ups and downs of everyday life. Inositol is a precursor of important chemicals needed for proper neurotransmission.*

Maintains Emotional Balance

Health care professionals in many parts of the world use St. John's wort to stabilize mood. Inositol works to bring about greater emotional tranquility. Kelp, a rich source of B-complex vitamins and minerals, supports healthy brain tissue and helps maintain the membranes surrounding the brain, spinal cord, and sensory nerves.*

The Standard Process Mood Support Line

Along with St. John's Wort-IMT, Standard Process offers other products to assist in mood enhancement:

Orchex[®] contains male bovine reproductive gland Cytosol[™] extract. Products made with Cytosol[™] extracts contain natural nutrients and specific substances that are produced in a particular gland, such as nucleic acids, enzymes, hormone precursors, etc. The combination of mineral complexes, orchic Cytosol[™] extract, and other important nutrients in Orchex works together as a potent calmative to promote and help maintain balanced function of the central nervous system.*

Min-Chex[®] contains unique ingredients to help keep the nervous system healthy. Iodine helps regulate normal physical and mental growth and development. B-complex vitamins in Min-Chex aid in energy production and help maintain emotional balance.*

Min-Tran[®], our vegetarian natural calmative product, contains mineral complexes from pure-vegetable sources, including kelp and alfalfa. Min-Tran also contains calcium and magnesium that help promote emotional balance and maintain inner harmony.*

The Whole Food Difference

All Standard Process products are based on one simple belief – good health comes from good nutrition, and the best nutrients come from whole foods. Each supplement formula is built on this holistic paradigm. We combine whole, enzymatically active foods, including herbs, whole plants, and organ extracts, with essential vitamins and minerals for optimal health.
